**Soil sampling guidelines:****General:**

For laboratory work and subsequent interpretation to be effective, it is essential that care be exercised in ensuring the samples collected truly reflect the area under consideration. The following guidelines are provided to assist in the selection and submission of samples that are representative of the area being sampled.

**How to take soil samples:*****DO NOT CONTAMINATE SAMPLES BY CONTACT WITH FERTILISER OR USED FERTILISER BAGS.***

1. Establish that the area to be sampled has received similar fertiliser treatments and management.
2. Take samples up to 30cm deep and remove the top 10cm of soil.
3. Select samples in a random or grid fashion from the areas under consideration. To form a representative sample combine at least twenty cores (approximately 500g) from uniform areas that will receive a common fertiliser application. If a sample from one of the random points differs greatly from the others – do not mix it into the composite sample.
4. Samples can be put in sturdy plastic bags – just make sure to label them (on the outside) with a reference that is meaningful to you.

**NOTES:**

1. Send samples to the laboratory as quickly as possible. Do not allow samples to sit in moist or hot conditions prior to submission.

**PLEASE NOTE**

Any harmful or hazardous substances present in samples should be reported to Labserve on submission of samples and should be indicated on this form. Failure to declare such substances in samples could lead to legal action in the event of injury or harm to Labserve personnel or the environment.

To comply with legal requirements of our import permit, all samples originating outside of South Africa need to be declared when submitted.

**Disclaimer:**

1. Labserve reserves the right to refuse unsuitable samples or testing where it does not have the capability & resources to meet the customer requirements.
2. Labserve does not accept responsibility for the damage of samples en route to the laboratory.
3. Labserve reserves the right not to test samples if this Sample Registration Form is not signed.
4. Labserve reserves the right to refuse to test samples / release results if the customer's account is overdue.
5. The sender will be held responsible for the account if not otherwise instructed.
6. Labserve is not responsible for analytical inaccuracies due to inappropriate sample container/ storage before receipt/ sampling/ pre-treatment.
7. Please ensure that samples are correctly labelled.
8. Labserve reserves the right to subcontract or refer samples to other competent laboratories for testing if not able to do the testing at own laboratory.
9. Uncertainty values are available on request.
10. The laboratory commits itself to keep information obtained or created during laboratory activities for the customer confidential. If any information will be made publicly available either by an agreement between the laboratory and customer or by requirements in the law, the laboratory shall inform the customer in advance, unless it is prohibited by law.
11. Customer information may be used during SANAS or other external assessments, provided that all parties involved have signed a confidentiality agreement agreeing not to divulge any customer information.
12. By signing this form you are agreeing to the specifications as mentioned in points 1 to 11, and all the information recorded prior to signing.
